Dr. Roger Walk
Director
WSA-PMUSA
P.O. Box 26583
Richmond, VA 23261

Dear Roger,

Thank you for inviting me to visit WSA at PMUSA. I am very glad that you and the scientific staff do understand the issues of smoking and health hazard and are indeed doing your utmost to minimize this hazard. As I indicated to you, I will be happy to collaborate with your team on the current study that you are planning to conduct. I am proposing to expand the dimension of this study by measuring PAH, Nireosamine and some polycyclic amines on lymphocytes samples of these subjects since you will have blood samples already. We have developed an immunohistochemical assay that works nicely on these samples and add a desirable dimension to your study. In addition, supplementing your work of biomarker measurement with some genetic polymorphism analysis will help us detect individuals that are more susceptible to Tobacco exposure. Further, I would like to receive a copy of the grant announcements that you will be mailing to individuals throughout the country.

On the subject of my recruitment, I am interested in pursuing this opportunity in general. However, flexibility on both parties is desirable so we can accommodate each other's need.

PM3006532476

Having your team of scientists conducting unbiased work can certainly will enhance your commitment to minimize the product hazard and add to PMUSA credibility among the scientific community. The idea of working for WSA is appealing to me given the resources that are available and most certainly make a significant contribution to both our causes.

Thank you again and please give my best regards to Drs. Carchman and Elves. I hope to hear from you soon.

Your Truly,

Aizen J Marrogi, MD
